Code names of exchange price indices consist of 4 parts:

1. The first part (BUTB) indicates the source of information for the index and the entity which calculates it using its proprietary methodology.
2. The second part (OTC) indicates that the index is based on OTC transactions.
3. The third part indicates the aggregate commodity group on which the index is based and the type of the market:

SWex – Sawn Wood export (sawn wood for export),

SRBd – Steel Round Bar (steel round bar for the domestic market),

SSd – Steel Sheet (steel sheet),

MLd – Meal domestic (oilmeal for the domestic market),

CASex – Casein export (casein for export),

RSOex – Rapeseed Oil export (rapeseed oil for export).

4. The fourth part indicates a certain group of commodities within an aggregate commodity group. For example, BUTB-OTC-SWex-2Dcn – edged sawn wood of coniferous species, grade 2, 14-22%, DAP CN.

The absence of the fourth part serves as an indication of a composite price index (e.g., BUTB-SSd), while its presence shows that we deal with an individual index for a certain group of commodities within an aggregate commodity group (e.g., BUTB-OTC-SSd-GS).
